

UOIT & Hydrofuel Inc. - Natural Gas to Ammonia as a Potential Solution for British Columbia

In response to British Columbia's plan to becoming a low-carbon economy, UOIT prepared a report for Hydrofuel Inc about converting LNG (Liquefied Natural Gas) into carbon-free anhydrous ammonia while economically capturing the carbon in the methane in solid form.

UOIT

MITACS Report - Natural Gas to Ammonia as a Potential Solution for British Columbia

It is important to note that ammonia works very well for most transportation and stationary engine applications, and especially well for remote locations.
